Which Dorian?

A: Cleonides' Dorian. B: modern Dorian. Both start at 220 Hz, using 200-cent tones and 100-cent half-tones.

Degrees 2 and 6 differ. The shared name does not preserve the interval order.

A · Cleonides

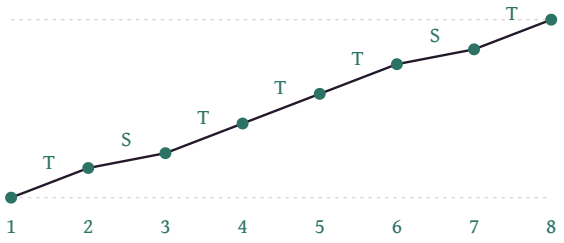

δώριον Dorian

S · T · T · T · S · T · T

B · Modern name

Dorian

T · S · T · T · T · S · T

Listen: A, then B

Eight ascending notes in A, a pause, then eight in B. Pure sine tones; this sound and the shared starting pitch are modern teaching choices. The modern label identifies an interval order, not a historical tuning. This is not a reconstruction of ancient performance.

Same starting pitch, 220 Hz. Differences are B minus A, in cents.

Degree	A · Hz	B · Hz	Difference
1	220.000	220.000	same
2	233.082	246.942	+100.000
3	261.626	261.626	same
4	293.665	293.665	same
5	329.628	329.628	same
6	349.228	369.994	+100.000
7	391.995	391.995	same
8	440.000	440.000	same

Read Cleonides

The named span

> τέταρτον … ἔστι δὲ ἀπὸ ὑπάτης μέσων ἐπὶ νήτην διεζευγμένων, ἐκαλεῖτο δὲ δώριον.
>
> The fourth … runs from hypatē mesōn to nētē diezeugmenōn; it was called Dorian.
>
> *Cleonides, Harmonic Introduction 9; Jan 1895, pp. 197–198. Ellipses mark omissions.*

The diatonic intervals

> … τέταρτον δὲ οὗ πρῶτον μὲν ἐπὶ τὸ βαρύ, τρίτον δὲ ἐπὶ τὸ ὀξύ …
>
> The fourth: the one whose [semitone is] first toward the low end and third toward the high end.
>
> *Cleonides 9; Jan p. 198, lines 14–19. Square brackets supply words understood from the preceding clause.*

Count the spaces between notes, starting at each end: Cleonides places these two small steps 1 from the low end and 3 from the high end. βαρύ is “low”; ὀξύ is “high”; ἡμιτόνιον is “half-tone”.

The preceding named spans are introduced in the enharmonic discussion. After listing the diatonic half-step positions, Cleonides explicitly carries the names across:

> ἔστι δὲ καὶ ταῦτα ἀπὸ τῶν αὐτῶν φθόγγων ἐπὶ τοὺς αὐτοὺς καθάπερ ἐπὶ τῆς ἁρμονίας καὶ τοῦ χρώματος καὶ ἐκαλεῖτο τοῖς αὐτοῖς ὀνόμασιν.
>
> These too run from the same notes to the same notes as in the enharmonic and chromatic, and were called by the same names.
>
> *Jan p. 199, lines 1–3. New literal translation; “enharmonic” translates ἁρμονία in this passage.*

Modern names: Steps to Music Theory, §11.1. Matching an interval order does not equate ancient performance, melodic practice, tuning or ethos with a modern mode.
